

Want to learn about power capacitors?

Join us for our Training Thursdays webinar series

Eaton's power capacitor product experts are excited to offer free online training courses over the next several months. These classes are open to anyone interested in learning more about power capacitors and their applications. This training offers the opportunity to learn, while minimizing travel and maintaining social distancing. A certificate of attendance will be provided at the end of each session.

Additional details

- Occurs on the second Thursday of October, November, January and February
- Time of each session: 11:30 AM - 1:30 PM ET
- Hosted via GlobalMeet

Date	Course Description
October 14, 2021	Capacitor unit design and construction Learn about unfused and internally fused construction, ratings, standards and testing.
November 11, 2021	Capacitor switches and pole-mounted banks This session will cover oil-filled and vacuum switch technologies, zero voltage closing (ZVC) and pole-mounted components.
January 13, 2022	Substation open-air capacitor banks from distribution up to transmission Learn about the differences in protection options and key factors in decision making.
February 10, 2022	Harmonics This session will provide an overview of sources of harmonics, distortion effects on power systems, mitigation options and types of harmonic filters.
